Retake

1. An "ignored" file in git is one that:

1 / 1
point

Is enumerated in a **.gitignore** file

Correct

It must be in a **.gitignore** file, either by complete name or wildcard

Exists in the working tree, but has never been added to the project

Does not belong to the project owner

Has never been added to the repository

2. The command **git rm some_file**:

1 / 1
point

Removes **some_file** from the repository, but not from the working file tree

Removes **some_file** from the working file tree and the index

Correct

It is removed from the working tree and the index

Removes **some_file** from working file tree, but not from the repository

3. The command **rm some_file**

1 / 1
point

Removes **some_file** from the repository, but not from the working file tree

Removes **some_file** from working file tree, but not from the repository

Correct

It is removed only from the working tree, the repository is unchanged

Removes **some_file** from the repository and from the working file tree

4. To list all files in the repository, issue the command:

0 / 1
point

git ls-files

git ls

This should not be selected

This is not a git command

git dump-list

git log --numstat

5. The command **git mv some_file new_name_or_location**

0 / 1
point

Moves (renames) the file in both the repository and the working tree

Moves the file only in the repository

This should not be selected

It moves the file in both the repository and the working tree

Moves the file only in the working tree
