Back to Week 3

Retake

1. To get all patches between your current branch and the master branch, do:

1 / 1
point

git format-patch master

Correct

This will generate patches since last synced with master

git format-patch --all master

2. The best way to form patches for use with git is to:

1 / 1
point

Use git-format-patch

Correct

This ensures all formatting is done correctly for git use

Use diff -Nur

Un-selected is correct

Work in a text editor while comparing sources

Un-selected is correct

3. In modern advanced distributed projects, submitting patches through email is:

0 / 1
point

Something only used for relatively simple submissions, often to subsystem maintainers

The best procedure, lowest common denominator, since not everyone has git

Prohibited

This should not be selected

This would be an exceedingly rare rule

4. When applying patches:

0 / 1
point

It is good to use the --interactive option

It is a good idea to test first with the --dry-run option

It is good to use the --force option

This should not be selected

There is no such option

5. Select the true statement:

0 / 1
point

Most modern email clients have built-in support for git, so one need not worry about whitespace, line-wrapping and other potential problems

This should not be selected

Email clients are git-ignorant

Most modern email clients do not have built-in support for git, so one needs to worry about whitespace, line-wrapping and other potential problems
