1. When you clone a remote repository, you receive:

- ⦿ A complete copy, including all branches and their detailed history

  Correct
  Cloning makes a complete copy by definition

- ◯ A read-only version of the repository

- ◯ A complete copy, including only the most recent commits of each branch

---

2. To make a compressed tarball of the most current version of your repository, do:

- ◯ **git archive | gzip > myproject.tar.gz**

- ◯ **git archive HEAD > myproject.tar.gz**

- ⦿ **git archive HEAD | gzip > myproject.tar.gz**

  Correct
  This is correct

3. Someone's remote branch could be merged into a certain branch on a repository by using (select all that apply):

- ☑ Having the person doing a push if and only if that person has commit privileges for the remote repository

  Correct
  This is normal for projects with only a few well coordinated developers as it can be messy if their are conflicting development paths

- ☑ Having the person issue a pull request and then having the maintainer take care of it

  Correct
  This is a normal method
