0 / 1
point

1. How can you get a brief list of all git subcommands?

○ **man git-help**

This should not be selected
This gives a longer set of documentation

○ **git**

✓

1 / 1
point

2. Which command initializes a new Git repository:

● **git init**

Correct
This populates the **.git** directory

○ **git log**

○ **git new**

✕

0 / 1
point

3. How would you store in the repository the user's name and email address?

● **git set user.name "myname" ; git set user.email "me@linux**

This should not be selected
There is no **git set** command

○ **git setinfo user.name "myname" ; git setinfo user.email "me@linux**

○ **git config user.name "myname"; git config user.email "me@linux"**

✓

1 / 1
point

4. Which command places new files in the repository?

○ **git commit**

○ **git log**

● **git add**

Correct
This adds new (and/or updated files) to the repository

✓

1 / 1
point

5. Which command puts changes in the repository?

● **git commit**

Correct
This puts all changes in the repository. It is often combined with the **-a** option to make sure all modified files are properly updated.

○ **git add**

○ **git log**
