1. Gerrit is:

○ A more advanced replacement for git

◉ An enhanced method of using git for more complex projects

Correct
Gerrit is built on top of git

✓

1/1 point

2. What are some of the advantages of using Gerrit? Select all answers that apply.

☑ It introduces a more robust layer of code review by potentially mutliple individuals

Correct
This can really help to utilize more eyeballs and talent

☑ It can reduce single maintainer bottlenecks

Correct
Sometimes an individual maintainer/reviewer cannot work fast enough for many reasons

---

✓

1/1 point

3. Gerrit works best when:

○ There are many changes to commit

◉ There is one change per commit

Correct
This makes review easier

✓

1/1 point

4. With Gerrit, contributors submit their work to:

○ The upstream and then reviewers pick from there

◉ The reviewing layer, rather than fully upstream

Correct
Use of this layer is a major purpose of Gerrit

✗

0/1 point

5. With Gerrit, reviewers:

○ Work with both the upstream and contributor layers

◉ Work only with the contributor layer

This should not be selected
Reviewers work directly with contributors and decide when and how to submit upstream

○ Work only with the upstream layer
